

Customer Journey Map

This document maps the end-to-end experience of the primary user (Ravi Kumar, smallholder farmer) as he discovers, uses, and benefits from OptiCrop from initial awareness through to confident crop selection.

Stage 1 Awareness

Touchpoint	District agricultural fair (Krishi Mela), government SMS alert, word of mouth
User Action	Hears about a free digital tool that recommends the best crop for his soil
Thoughts	"Could this actually work for me? My land is different from everyone else's."
Feelings	Curious, slightly sceptical
Pain Points	Unaware of where to access the tool; no smartphone data plan
Opportunities	QR code printed on soil health card; offline PWA mode (Phase 2)

Stage 2 Onboarding

Touchpoint	Opens OptiCrop on a budget Android phone via 3G; lands on index.html
User Action	Reads the brief description; looks at the 7-parameter input form
Thoughts	"N, P, K what are those? The tooltip says 'from soil health card'."
Feelings	Slightly overwhelmed; relieved when tooltips explain each field
Pain Points	Doesn't know exact NPK values estimates from soil health card
Opportunities	Pre-fill typical ranges from region; Hindi language toggle (Phase 2)

Stage 3 Using the Tool

Touchpoint	Fills the 7-input form with estimated values; clicks Predict
User Action	Submits form; waits for result
Thoughts	"It loaded in under 2 seconds. It says: Rice 97% confidence!"
Feelings	Surprised by speed; growing trust in the result
Pain Points	Unsure if his NPK estimates are accurate enough
Opportunities	Show confidence score with honest uncertainty messaging

Stage 4 Result & Decision

Touchpoint	result.html shows recommended crop, confidence %, top-3 alternatives
User Action	Reads crop recommendation; shares screenshot with wife and neighbour

Thoughts	"Rice at 97% and maize as backup that makes sense for my fields."
Feelings	Confident; empowered to make a data-backed decision
Pain Points	Wants to know local market price before committing
Opportunities	Market price API integration (Phase 3 roadmap)

Stage 5 Post-Harvest Feedback

Touchpoint	Revisits OptiCrop after harvest to verify recommendation accuracy
User Action	Shares yield outcome; uses the tool again for next season
Thoughts	"The rice yield was 15% better than last year. I'll use OptiCrop every season."
Feelings	Loyal, satisfied; advocates the tool to other farmers in the village
Pain Points	No mechanism to report outcome or provide feedback
Opportunities	Feedback loop feature to collect outcome data and improve model accuracy
