

Communication

This document describes the communication strategy, tools, and protocols used by the OptiCrop team throughout the project lifecycle.

Communication Tools

Tool	Purpose	Frequency
WhatsApp Group OptiCrop Dev	Quick updates, blockers, file sharing	Daily
GitHub Issues	Bug reports, feature requests, task assignment	Per sprint
GitHub Pull Requests	Code review, discussion, merge decisions	Per feature
Google Meet	Weekly sprint review and planning calls	Weekly (30 min)
Google Docs	Shared draft documents before PDF export	As needed
Email	Formal communication with faculty mentor	Bi-weekly

Sprint Communication Protocol

- " **Daily stand-up** (async via WhatsApp): What I did / What I'll do / Any blockers
- " **Sprint review** (Google Meet): Demo completed features; update Kanban board; record velocity
- " **Sprint planning**: Assign issues from backlog; estimate effort in story points
- " **Retrospective**: What went well / What to improve / Action items for next sprint

Faculty Mentor Communication

Phase	Communication	Outcome
Phase 1	Submitted brainstorming doc for feedback	Mentor approved ML prediction engine as project focus
Phase 2	Shared requirements doc and technology stack	Mentor suggested adding confidence score (FR-05)
Phase 3	Presented solution architecture diagram	Mentor recommended modular ML utils (app/ml/)
Phase 4	Shared sprint plan and risk register	Mentor added model accuracy risk to register
Phase 5	Code walkthrough session with mentor	Mentor approved code quality; suggested docstrings

Phase 6	Shared pytest results and JMeter report	Mentor confirmed testing is sufficient for submission
Phase 8	Demo dry-run with mentor present	Mentor provided feedback on demo flow and Q&A; prep
